Tomorrow's Composites, Today!

The IDI 3i Composites Technology Center is the research and development division of IDI Composites International. We generate and prove new ideas, approaches and materials to address the engineering and performance challenges of both our customers and the industry.

Mission

The IDI 3i Composites Technology Center's mission is to design, develop and manufacture thermoset composite compounds for innovative customers seeking to go beyond the value limitations of conventional materials.

IDI Global Headquarters

IDI Composites International (IDI) is the premier global formulator and manufacturer of thermoset molding composites and compounds for OEMs, Tier 1s and molders. IDI provides standardized and customized polyester/vinylester-based sheet molding compounds (SMC), bulk molding compounds (BMC), and new lines of high performance composites, Ultrium™, Fortium™, Flamevex™ and Alluralite™ that are manufactured for the most demanding applications.

 **3i Composites
Technology Center**
inquiry • ideas • innovation

The 3i Composites Technology Center is the research and development division of IDI Composites International, with locations in both North America and Europe. Due to increased demand from OEMs, Tier 1s and molders for stronger, lower density and higher performing materials, the 3i Technology Center was founded to meet these industry-wide demands.
