**IDI Announces E-200 Series Thermoset Composites for Use in  
Alternate Energy Market**

NOBLESVILLE, INDIANA (USA) – IDI Composites International, the premier global formulator and manufacturer of thermoset molding compounds, announces its E-200 Series of Sheet Molding Compound (SMC) for use in alternate energy applications. The E-200 Series is able to withstand prolonged exposure to harsh environments common to wind turbines, solar photovoltaic panels, and fuel cells without losing any of its high-performance physical properties.

The E-200 Series SMC has superior resistance to corrosion, UV deterioration, and various contaminants, making it ideal for use in alternate energy applications that undergo frequent exposure to sun, heat, moisture, and other natural elements. E-200 SMC also provides excellent structural rigidity, a high strength-to-weight ratio, and is fire code compliant.

IDI also offers Bulk Molding Compounds (BMC), which offer similar high-performance properties ideal for alternate energy applications. BMC will not rust, creep, or fade like

traditional materials, such as metals and thermoplastics, and is available for injection molding requirements.

**About IDI Composites International:** IDI Composites International is the premier global formulator and manufacturer of thermoset molding compounds for custom molders and OEMs. The company provides customized polyester/vinylester-based bulk molding compounds (BMC) and sheet molding compounds (SMC) for the world's most demanding markets, including automotive, electrical, appliance, food service, and energy.

Headquartered in a 200,000 square foot manufacturing facility and research center in Noblesville, IN (USA), IDI has a strong presence in the international thermoset composites market. To support a growing customer base world-wide, the company operates multiple wholly-owned manufacturing facilities in Europe, Asia, and The Americas.

IDI Composites International is a Registered Trademark of IDI Composites International.
