Thermoset Bulk Molding Compound Used in Krix Loudspeakers

IDI recently collaborated with a leading molder and IDI's licensee in Australia to develop a Bulk Molding Compound (BMC) solution for Krix Loudspeakers of Australia. BMC, a composite consisting of fiber reinforcement in a polymer resin, was chosen by Krix to be used in the company's cinema

speaker horns. [Click here](#) to learn more about this application.

IDI Supplies Topp Industries with Thermoset Materials for Wastewater Lift Stations

IDI announces that its Bulk Molding Compound (BMC) and Sheet Molding Compound (SMC) have been selected by Topp Industries for its lift station components. These

templates are inserted into Topp's lift stations because they provide excellent corrosion, chemical, and atmospheric resistance, allowing Topp's lift stations to last longer than lift stations made of steel and concrete units. [Click here](#) to read more.

IDI Uses NIR Spectrometer Technology for Precise Testing of Thermoset Molding Compounds

IDI has recently made a capital equipment investment in a Fourier Transform Near Infrared Spectrometer (FT-NIR). The machine is used to test raw materials, pastes, and special additives that are used in Sheet Molding Compounds (SMC) and Bulk Molding Compounds (BMC). IDI is one of only two companies in the industry that owns this unit, enabling the company to control properties that directly affect quality to the end-user of their products. [Click here](#) for more information on IDI's FT-NIR Spectrometer.
